

Handrails

PRODUCT DESCRIPTION

Fibreglass handrails can be manufactured to any size in sections for easy installation on site.

FRP (Fibreglass Reinforced Polyester) handrails are thermally stable, corrosion resistant, lightweight, high strength, have inherent colour and are easy to assemble.

FRP Handrails can be built to unlimited lengths/sizes.

Stainless steel bolts attach the fittings securely to the tube. There is no welding required when building with FibreClamp fittings.

FRP fittings are manufactured from high quality resin and glass reinforcing, making them ideal for indoor or outdoor use.

The only tools required for building FRP handrail structures are a hacksaw, drill and spanner.

APPLICATION

Composite Engineering handrails are suitable for a variety of structures including stand alone hand railing, racking, machine guards, safety barriers, shop fittings and many other applications.
